

How to Care for Your Upholstery

Rotate all loose cushions frequently to assure even wear. Vacuum dust & dirt from all fabric, cracks & crevasses. By far, Fabric Protection is the best possible way to extend the life of your upholstery. Read the short section on how fabric protection works to find out why.

- Vacuum often to reduce grit that can cause abrasion.
- Reverse loose cushions weekly for even wear.
- Protect from the sun. Ultraviolet light can cause deterioration.
- Keep Pets off of furniture. Pet's body oils rub off and are very difficult to remove.
- Use caution with clothing such as Blue Jeans. Fabric dyes can transfer onto upholstered furniture.

All upholstered furniture will become soiled through use. Most spills & soil on fabric protection treated upholstery will clean easily and quickly provided that the proper cleaning procedures are followed. A fabric protection application is not an absolute impenetrable barrier and improper cleaning methods can damage both the fabric and the treatment.

1. Blot (don't rub) spills immediately with a clean absorbent cloth while spill is still fresh. Dried spills are more difficult to remove.
2. Identify the cleaning code for your type of fabric. This is very important to determine the type of cleaner to use.
3. Always read & follow the instructions on the cleaning agent.
4. Use distilled water with the cleaning agent if water is called for ([W & WS Codes](#) Only)
5. Pretest any cleaner on any fabric in a hidden area. Check for Color fastness and fabric compatibility.
6. Keep a small spill small. Work lightly, blotting from center to the edges. "Feather" the edges by dampening edges irregularly and blotting quickly to avoid rings.
7. Quickly dry a cleaned spot using a small fan or blow dryer on low.

Cleaning Codes **W** Spot Clean with water based shampoo or foam upholstery cleaner. Pretest for color loss and fabric compatibility. Do not overwet. Use a professional cleaning service for overall soiling. **S** Spot

clean with a water-free cleaning solvent. Pretest for color loss and fabric compatibility. Do Not Use Water! Use a professional cleaning service for overall soiling.

WS

Spot clean with upholstery shampoo, foam from a mild detergent, or a mild dry cleaning solvent. Pretest for color loss and fabric compatibility. Do not overwet. Use a professional cleaning service for overall soiling.

X

Clean only by vacuuming or light brushing with a non-metallic brush. Do Not Use Water or Dry Cleaning Solvents. Consult a professional upholstery cleaner.

Fabric Protection Choosing to apply fabric protection is the best possible way to protect your new upholstered furniture and keep it looking new.

Treated Upholstery will:

- Last Longer
- Look Better longer
- Clean easier:

The fabric protection treatment is a spray applied to all surfaces of the upholstered item. The application "wicks" into the fibers of the fabric creating a protective barrier against soil and stains.

Fabric Protection Treatment

- Has no smell & is non-allergenic
- Does not change the look of the fabric
- Does not change the feel of the fabric

Not only does a fabric protection treatment create a barrier against stains and spills, it has been shown to provide a barrier against the dirt and dust particles that cause excess abrasion and can cause premature fabric wear
